# Heading 1

This document contains a fake list. There is some preceding text in this paragraph which makes it clear that wat goes before is a regular paragraph. Here is the list:

- It is an unordered list.

- It contains several items that are just preceded by a dash.

- So this should generate a WCAG error.

Let's also include an ordered list. There is some preceding text in this paragraph which makes it clear that wat goes before is a regular paragraph. Here is the list:

1. This is an ordered list

2. It also contains several items, preceded by a number

3. This should also generate a WCAG error.

Let's end the document by a normal parahraph to see if the checker can distinguish it from the fake lists.
